

防伪系统整合dedecms示例

The screenshot shows the DedeCMS v5.7 administration interface. The top navigation bar includes 'DEDECMS v5.7', user information '您好: admin', and various system links like '主菜单', '内容发布', '内容维护', '系统主页', '网站主页', '会员中心', and '注销'. A search bar is located on the right. The left sidebar contains a menu with categories like '核心', '模块', '生成', '采集', '会员', '模板', and '系统'. The main content area displays a table of documents under the heading '普通文章 > 文档列表'. The table has columns for ID, selection, article title, update time, category, clicks, HTML status, permissions, publisher, and actions. Three documents are listed: ID 3 (title 'sss [图片]', update time 2016-05-08, category '测试栏目', clicks 116), ID 2 (title '天长地久婚纱', update time 2016-05-07, category '测试栏目', clicks 88), and ID 1 (title '测试产品呵呵', update time 2016-05-07, category '测试栏目', clicks 133). Below the table are buttons for '全选', '取消', '更新', '审核', '推荐', '移动', '删除', '自动关键字', '增加属性', and '删除属性'. A pagination bar shows '共 1 页/3条记录' and a search bar with '选择栏目...', '关键字:', '排序...', '属性...', and '搜索'.

The screenshot shows the '批量生成防伪码' (Batch Generate Anti-counterfeit Code) form in the DedeCMS v5.7 interface. The form is titled '批量生成防伪码' and is located under the path '首页 > 防伪码管理 > 生成防伪码'. The form fields include: '生成批次:' (20160516161147), '* 防伪码长度:' (20, with a note '(12-32以内, 可在系统设置中修改限定长度)'), '防伪码前缀:' (empty, with a note '(长度为0-4位) 如无需要可不填写'), '防伪码形式:' (前缀+数字和字母), '* 所属产品:' (选择产品, with a note '默认列出10个产品, 输入产品关键字可自动搜索'), '* 生成数量:' (sss, with a note '(一次过多可能会造成数据库处理变慢, 建议10万条以内)'), '销售区域:' (测试产品呵呵, with a note '为空'), and '是否启用:' (checked, with a note '(启用的防伪码才能查询)'). A red arrow points to the '所属产品' field with the text '直接调用 dedecms中的产品'. A '批量生成' button is at the bottom.

悠久防伪一直专注于防伪溯源解决方案。
